proved its effectiveness in influencing the chronic hepatitis B virus and HIV infection. Any drug is delivered to us from suppliers. Therefore, here you will never find overpriced.

About the original drug Epivir

Lamivudine is the active ingredient in the originator drug. It helps to reduce the number of viral cells in the blood, which are multiplied by the hepatitis B virus and HIV infection. Lamivudine, like any other substance, is not able to completely overcome HIV, but nevertheless, it reduces the likelihood that a person will develop AIDS and other serious infections, including cancer. Also, in combination with other precautions, the risk of transmission of infections to contact people is reduced.
