Action of the ZECYTE drug

ZECYTE is one of the most effective anti-cancer drugs that fights metastases in castration-resistant pancreatic cancer. The tablets have an effect on male hormones, suppress them, thereby inhibiting biosynthesis in the tumor itself, testicles and adrenal glands.

Features of the use of the drug ZETZIT

Before starting therapy, a doctor's consultation is required! Be sure to tell your doctor about any other medications you are currently taking. After all, the simultaneous course of treatment of different drugs can reduce the effectiveness of each of them. During the period of therapy, it is necessary to strictly follow the instructions of a specialist, to observe the exact dosage of the medication taken. Increasing the dosage without consulting your doctor is highly discouraged! The course of treatment is usually long. The drug is usually prescribed by a doctor together with prednisolone.
